Experiment 6

Aim:

To design and build a complete automation layer in Zoho Creator for the existing "vehical service form" application, demonstrating the correct usage of all eight Workflow options in Zoho Creator — Form Workflows, Schedules, Approvals, Payments, Blueprints,Batch Workflows, Report Workflows, and Functions

Workflow used:

Workflow Option	Workflow Name	Purpose	Trigger / Frequency
Form Workflows	On_ServiceRequest_Submit_Workflow	Sends an instant confirmation email to the owner with their Service Request ID and notifies the front office of the new request	Triggered instantly on Add (form submission) of Service_Request_Form
Schedules	Daily_ServiceDate_Reminder_Schedule	Runs once a day to identify owners with a service drop-off scheduled for the next day and sends a reminder with the estimated duration and documents to carry	Scheduled to run daily at 6:00 PM, all year round
Approvals	HighCost_Repair_Approval	Routes any repair estimate exceeding a defined cost threshold to the owner for explicit approval before the technician proceeds with the work	Triggered on Edit whenever Estimated_Service_Cost exceeds the configured high-cost threshold

Payments	Final_Service_Payment_Workflow	Generates a payment link for the computed Net_Service_Cost_Payable, redirects the owner to the payment gateway, and updates Payment_Status automatically on success or failure	Triggered when a service request's Status changes to 'Ready for Pickup', before the vehicle can be released
Blueprints	Service_Lifecycle_Blueprint	Defines and enforces the full service lifecycle as a controlled sequence of stages with role-based transition permissions	Applied to every record in Service_Request_Report; stages: Requested → In Diagnosis → In Repair → Ready for Pickup → Delivered
Batch Workflows	Bulk_ServiceDue_Reminder_Batch	Identifies all vehicles due for periodic service based on their last service date or odometer reading and sends a service-due reminder, processed in controlled batches	Triggered automatically on the 1st of every month, processing records in batches of 250

Automation Details (Workflow-wise)

On_ServiceRequest_Submit_Workflow (Form Workflow)

- Fires the moment a new record is added to Service_Request_Form.
- Sends a confirmation email to the owner containing their Service Request ID and drop-off details, and notifies the front office to prepare a job card.

Daily_ServiceDate_Reminder_Schedule (Schedule)

- Runs automatically every evening without any manual trigger, querying all records where the Preferred Service Date equals tomorrow's date.
- Includes the estimated service duration and a checklist of items to remove from the vehicle before drop-off.

HighCost_Repair_Approval (Approval)

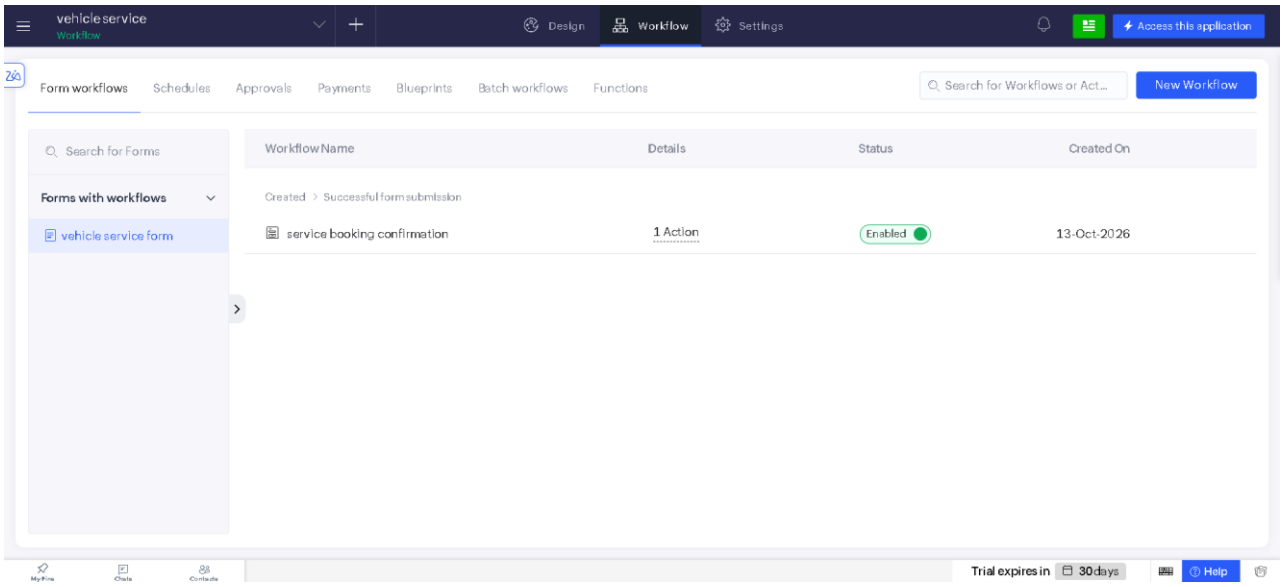

- Only repairs where the Estimated Service Cost exceeds the configured threshold require this approval step; routine services proceed directly without a delay.
- The record's Status remains at 'Pending Owner Approval' until the owner approves the estimate through their approval link or the front office confirms verbal approval on their behalf.

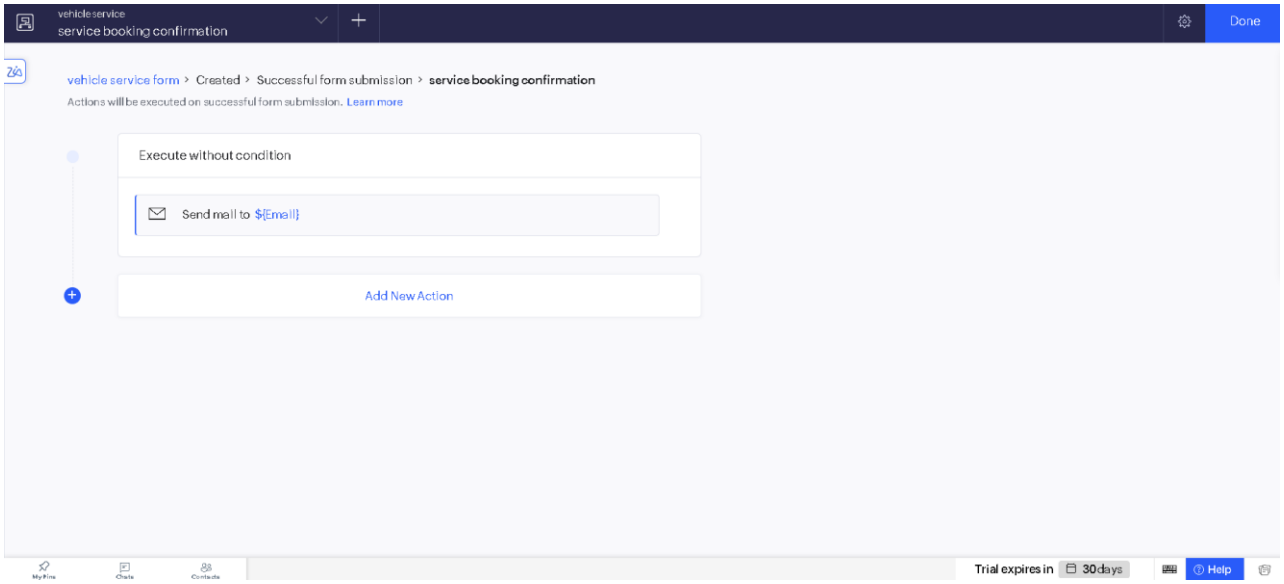

Final_Service_Payment_Workflow (Payments)

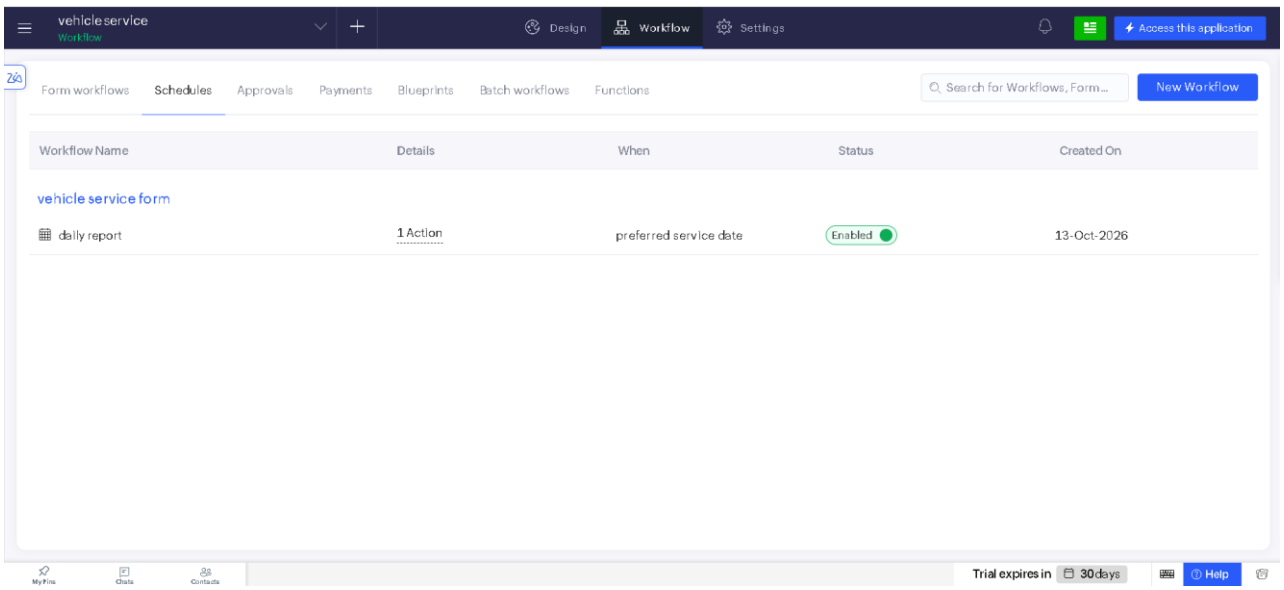

- Integrates with a payment gateway connector configured in Zoho Creator to generate a secure payment link based on the Net_Service_Cost_Payable formula field.
- On successful payment, the workflow automatically updates Payment_Status to 'Paid' and unlocks the vehicle-release step; on failure, it keeps the vehicle in a held state until payment clears. Service_Lifecycle_Blueprint (Blueprint)
- Each stage transition (e.g., In Repair to Ready for Pickup) is restricted to specific roles, so a front-desk user cannot mark a vehicle Delivered without technician sign-off and payment confirmation.
- The Blueprint view gives the service center manager a visual, auditable trail of exactly when and by whom each service request moved between stages. Bulk_ServiceDue_Reminder_Batch (Batch Workflow)
- Used at the start of every month to identify vehicles whose last service was over the configured interval ago and remind owners to book their next service.
- Processes records in batches rather than all at once, preventing the workflow engine from timing out on a large customer database.

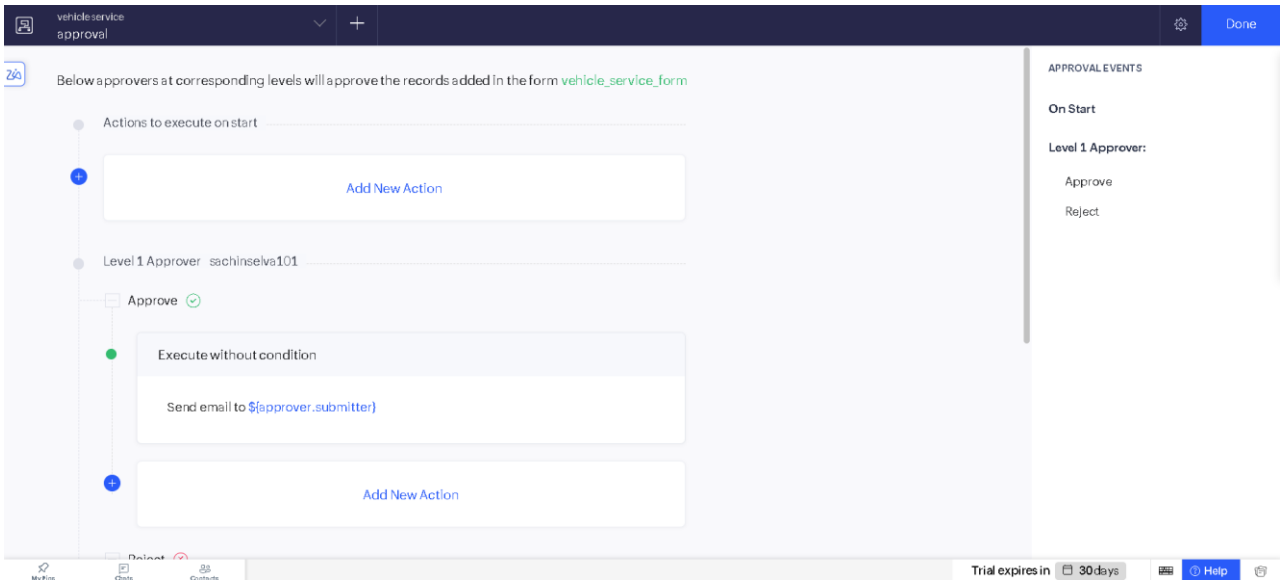

OnEdit_Recalculate_Cost_Workflow (Report Workflow)

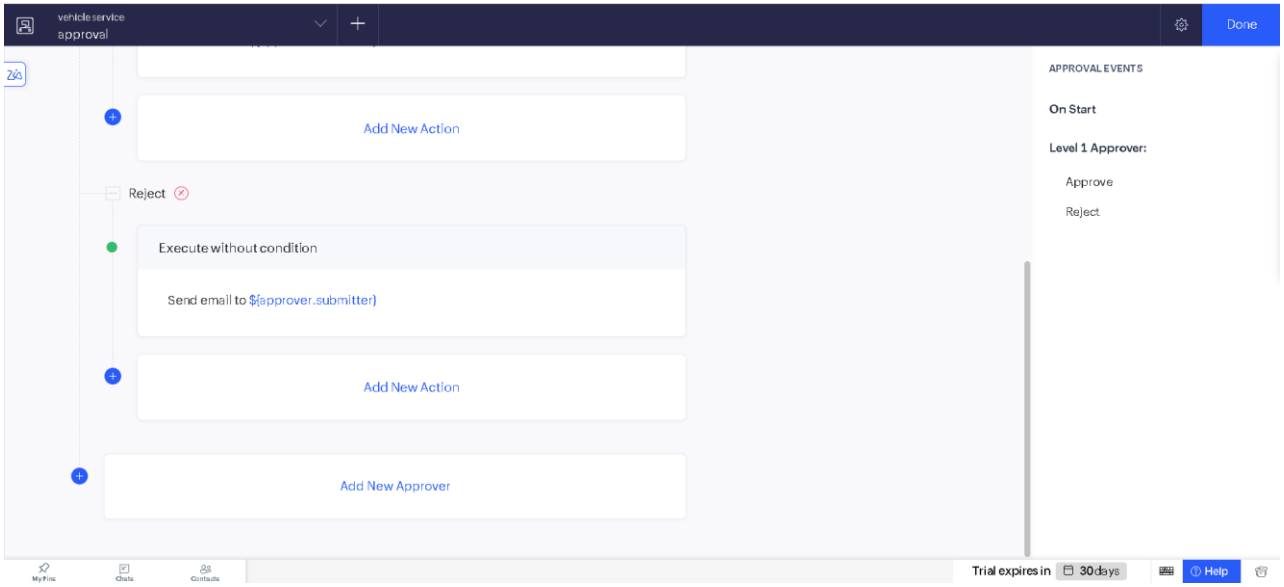

- Ensures that if front-office staff manually adjust the estimated cost or discount directly within the report grid, the Net_Service_Cost_Payable stays accurate without requiring a full form resubmission.
- Prevents inconsistent billing that could arise from manual overrides. Generate_ServiceInvoice_Function (Function)
- Written once as a reusable Deluge function, it can be called from multiple places: automatically once payment is confirmed and the vehicle is delivered, manually via a 'Resend Invoice' button, or from a monthly batch that reconciles invoices for accounting.
- Centralizing this logic in a function avoids duplicating invoice-generation code across multiple workflows.

sachinselva101@gmail.com has added a record in form vehicle service form
Dear customer,
we got your vehical service request,
Your service has been successfully booked.
Regards,
abc services
