Experiment 5

Aim:

To design and build a complete suite of Reports in Zoho Creator for the existing "vehical service Form" application, demonstrating the correct usage of all nine Report Types available in Zoho Creator

Reports used:

The table below maps every Report Type available in Zoho Creator to a specific report built on the Service_Request_Form.

Report Type	Report Name	Purpose	Key Configuration
List View	All_Service_Requests_List	Provides a simple, scrollable list of every service request with key columns for quick browsing and search	Columns: Owner Name, Vehicle Registration Number, Vehicle Type, Service Type, Service Status; sorted by Preferred Service Date (ascending)

Report Type	Report Name	Purpose	Key Configuration
Spreadsheet View	Service_Requests_Spreadsheet	Provides an editable, grid-style view for the front office to bulk-update repair progress status	Inline-editable columns: Diagnosis Status, Repair Status, Ready for Pickup Status; grouped by Vehicle Type
Kanban View	Service_Status_Kanban	Displays service requests as draggable cards grouped by repair stage, so staff can visually track progress	Grouped by Status field: Requested / In Diagnosis / In Repair / Ready for Pickup / Delivered; card shows Owner Name and Vehicle Type
Calendar View	Service_Schedule_Calendar	Displays service requests on a calendar based on preferred service date, to help	Based on Preferred_Service_Date; each day cell shows the count of vehicles scheduled and vehicle

		progress	Vehicle Type
Calendar View	Service_Schedule_Calendar	Displays service requests on a calendar based on preferred service date, to help technicians plan their daily workload	Based on Preferred_Service_Date; each day cell shows the count of vehicles scheduled and vehicle type breakdown
Map View	Owner_Location_Map	Plots owners' pickup addresses on a map, to help the pickup/drop team plan efficient collection routes	Based on Pickup_Address (geocoded); pins colored by Service Type
Timeline View	Service_Activity_Timeline	Displays service request submissions along a time axis, to help the manager track service demand trends across the month	Based on Service_Request_Submitted_On; grouped by week, showing cumulative service requests
Pivot Table	VehicleType_By_ServiceType_Pivot	Cross-tabulates Vehicle Type against Service Type to show which service categories are most requested per vehicle type	Rows: Vehicle_Type; Columns: Service_Type; Values: Count of Service Requests
Chart View	ServiceType_Distribution_Chart	Visualizes the number of service requests per service type as a pie chart, to help plan technician specialization and staffing	Chart type: Pie Chart; Segments: Service_Type; Values: Count of Service Requests

5. Report Configuration Details (Report-wise)

All_Service_Requests_List (List View)

 Default landing report for the front office, showing every service request in a flat, searchable
list.

 Includes a search bar and column-level filters for Vehicle Type, Service Type, and Service Status.

Service_Requests_Spreadsheet (Spreadsheet View)

 Used daily by the front office to update diagnosis, repair, and pickup-readiness status in bulk.

 Only Diagnosis Status, Repair Status, and Ready for Pickup Status columns are editable; all
other columns are read-only.

Service_Status_Kanban (Kanban View)

 Used by technicians and the front office to visually track how vehicles move from Requested
to Delivered.

 Staff drag a service request's card across columns as its status changes, updating the underlying Status field automatically.
Service_Schedule_Calendar (Calendar View)
 Used by technicians to see how many vehicles are scheduled for service on a given day and
plan bay allocation.
 Clicking a date drills down into the list of vehicles scheduled for that day.
Owner_Location_Map (Map View)
 Used by the pickup/drop team to plan an efficient route for collecting and returning vehicles.
 Helps group nearby pickups into a single trip to save time and fuel.

Service_Activity_Timeline (Timeline View)
 Used by the manager to monitor service demand trends across weeks and months.
 Helps forecast technician staffing needs during high-demand periods, such as festival seasons.
VehicleType_By_ServiceType_Pivot (Pivot Table)
 Used by the manager to understand which service categories are most common for each
vehicle type.
 Supports decisions on stocking specific spare parts for high-demand vehicle-service combinations.
ServiceType_Distribution_Chart (Chart View)
 Used in weekly review meetings to visually compare demand across service categories.
 Directly informs technician training focus and specialization decisions.
VehicleType_Wise_Summary (Summary View)
 Used by the manager to understand average vehicle age/usage patterns by type, informing
preventive maintenance offers.
 Summary totals feed directly into targeted service-reminder campaigns for specific vehicle
types.
6. Validation & Configuration Rules
 List View (All_Service_Requests_List): default sort by Preferred Service Date, ascending, so
the nearest service dates appear first.
 Spreadsheet View (Service_Requests_Spreadsheet): edit permissions restricted to the Front
Office role; all other fields locked.
 Kanban View (Service_Status_Kanban): card movement between columns triggers an automatic update to the Status field with a timestamp.
 Calendar View (Service_Schedule_Calendar): only the current and next day's schedule are
highlighted for operational focus.

 Map View (Owner_Location_Map): requires the Pickup Address field to be geocode-enabled
for accurate pin placement.

 Timeline View (Service_Activity_Timeline): data refreshes daily to reflect the latest service-
request trend.

 Pivot Table (VehicleType_By_ServiceType_Pivot): blank cells are displayed as zero rather
than being left empty, to avoid ambiguity.
 Chart View (ServiceType_Distribution_Chart): chart is set to auto-refresh whenever a new
service request is submitted.
 Summary View (VehicleType_Wise_Summary): vehicle types with zero requests in the period are still listed with a zero count, to flag underused service categories.

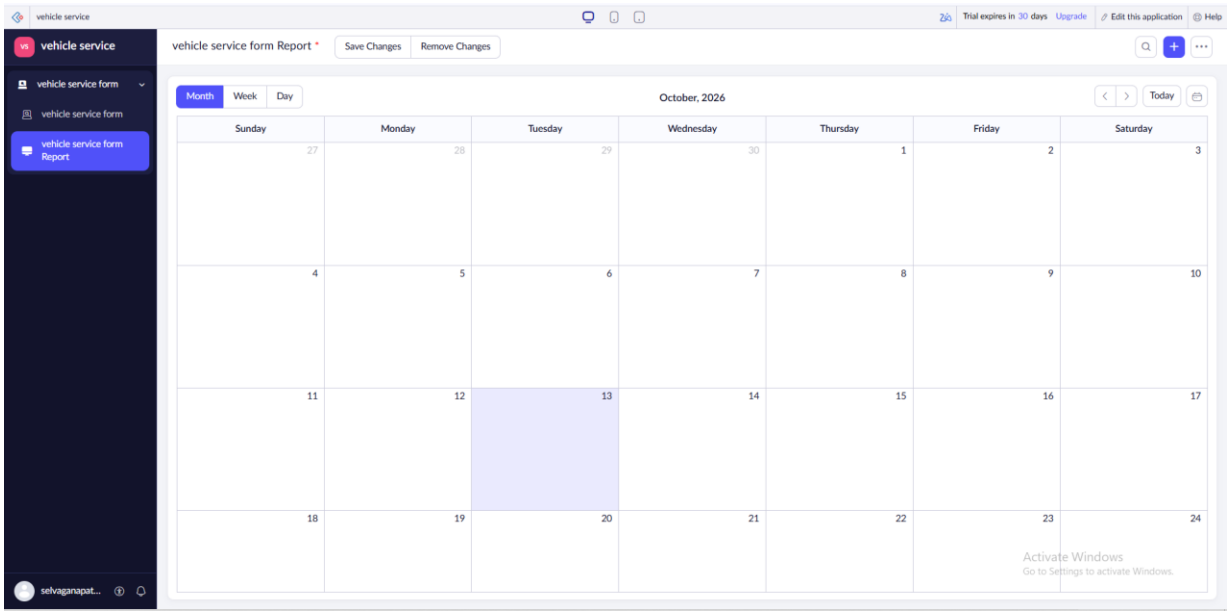

7. Workflow Summary
 Step 1: Owners submit service requests through the Service_Request_Form as covered in
the base use case.
 Step 2: The front office monitors incoming requests using the All_Service_Requests_List and
the Service_Activity_Timeline.
 Step 3: As diagnosis and repair proceed, technicians track progress visually using the Service_Status_Kanban.
 Step 4: Technicians use the Service_Schedule_Calendar to plan bay allocation for each day's
scheduled vehicles.
 Step 5: The pickup/drop team uses the Owner_Location_Map to plan efficient collection and
delivery routes.
 Step 6: The service center manager reviews the VehicleType_By_ServiceType_Pivot and ServiceType_Distribution_Chart in planning meetings to guide staffing and parts inventory.
 Step 7: On a daily basis, the front office uses the Service_Requests_Spreadsheet to update
repair progress in bulk, while the manager uses the VehicleType_Wise_Summary to plan maintenance-reminder campaigns.
8. Expected Learning Outcomes
 Understand the purpose and correct use case for each Report Type in Zoho Creator.
 Learn how to choose the right report type based on the stakeholder's decision-making need

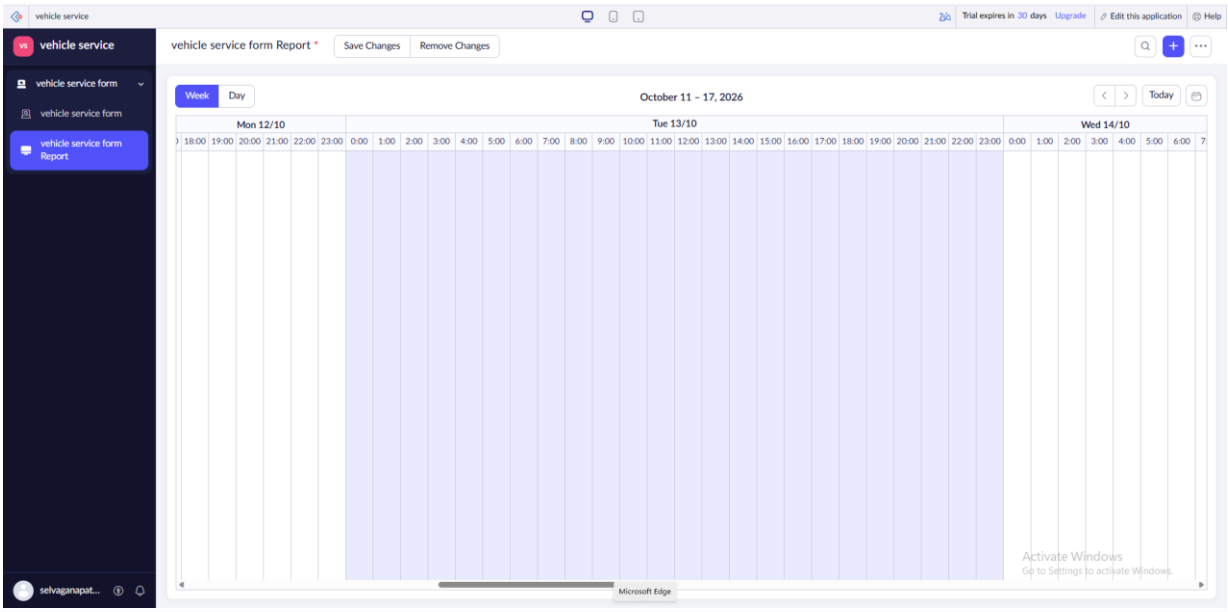

rather than default to a single list view.
 Practice configuring grouping, sorting, and summary logic across different report types on
the same underlying form.
 Understand how visual reports (Kanban, Calendar, Map, Chart, Timeline) support faster operational decisions than raw tabular data.

 Understand how Pivot Tables and Summary Views support planning and resource-allocation decisions.

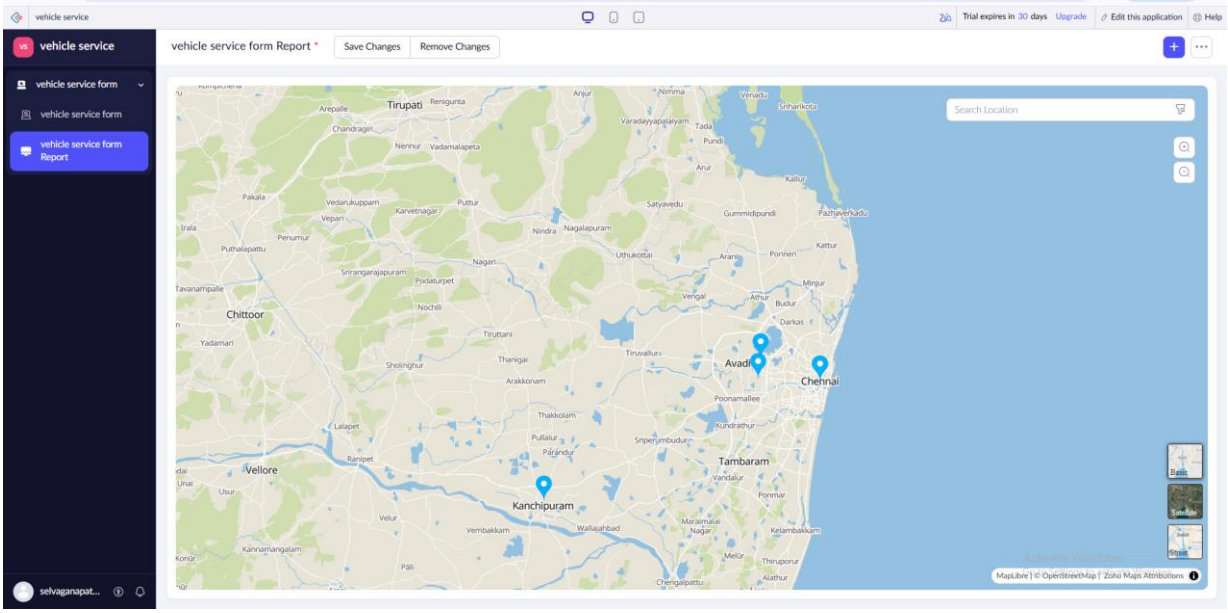

9. Deliverable for This Lab Exercise
Students must build all nine reports on the existing Service_Request_Form in Zoho Creator
exactly as specified above, configure the listed grouping and validation rules, and submit a
screenshot-based lab record showing: (a) each of the nine reports in its configured state with
sample data, (b) the report type selector in Zoho Creator's Report Builder for each report, and
(c) at least one drill-down or interaction (e.g., clicking a calendar date or dragging a Kanban
card) demonstrated with before/after screenshots.

Result:

A suite of Reports in Zoho Creator for the existing "Student Admission Enquiry Form" is created.
